OM SHUKLA

Software Engineer || Green Card Holder || No Visa Sponsorship Required

Cary, North Carolina, United States

(563) 726-4808 · shuklaom.jobs@gmail.com · linkedin.com/in/om-shukla

Summary

Results-driven Software Engineer with a Bachelor of Science in Software Engineering from Iowa State University. Experienced in Agile development, problem-solving, and collaborative team environments. Proficient in Java, JavaScript, C, C++, data structures, MySQL, mobile application development (Android Studio), and game development (Unreal Engine). Skilled in designing and implementing scalable solutions to meet IT business needs. Green Card holder (no visa sponsorship required) and open to relocation.

Technical Skills

Languages: Java, JavaScript, C, C++, MySQL
Frontend: React.js, Tailwind CSS, HTML5, CSS3, JavaScript
Backend: Spring Boot, REST APIs, JPA, MySQL
Tools & Technologies: Git, GitHub, Android Studio, Unreal Engine 5, Verilog, Intel Quartus Prime, Unity, Blender, Discord, Trello

Experience

Freelance Software Engineer — Feb 2026 - Present
DataAnnotation — Remote

- Evaluated and improved AI-generated code across Python, Java, and other technologies.
- Tested software implementations for correctness, efficiency, and adherence to best practices.
- Created detailed technical feedback to enhance large language model performance and accuracy.
- Solved complex programming challenges and validated algorithmic solutions.
- Worked independently on time-sensitive projects while maintaining high quality standards.

Repair Technician — Jan 2024 – May 2024
Iowa State University Book Store — Ames, IA

- Diagnosed and repaired hardware and software issues on Apple and Dell devices including laptops and desktops.
- Performed component replacements including displays, motherboards, batteries, and keyboards.
- Maintained detailed repair records and documented customer issues for quality assurance.

Sales Floor Associate - TechCyte — Jun 2022 – Sep 2022
Iowa State University Book Store — Ames, IA

- Recommended computer devices and technical solutions to customers by analyzing their needs and requirements.
- Maintained floor displays, organized inventory stocks, and ensured product availability in retail store.
- Provided technical assistance and support to students and staff using troubleshooting and customer service skills.

Android Developer Intern — Jan 2020 – May 2020
John Deere Academy — Bettendorf, IA

- Designed and built Android application user interface with intuitive navigation and user experience flows.
- Implemented application logic and functionality while participating in Agile and Scrum development workflows.
- Collaborated with team of 6 members using version control, code reviews, and collaborative development practices.
- Tech Stack: Android Studio, Java, GitHub, Discord, WebEx, Trello

Projects

VOIDBREAKERS August 2026 – Present
Personal Project Cary, NC

A first-person sci-fi survival game built in Unreal Engine, focused on exploration, resource management, and raiding derelict spacecraft. The project emphasizes modular, reusable gameplay systems and scalable architecture designed for future expansion.

- Designed and implemented a reusable inventory and storage system capable of supporting player inventories, ship storage, and world containers.
- Migrated core gameplay systems from Blueprint to C++ with a focus on maintainability, modularity, and separation of responsibilities.
- Developed data-driven item architecture using Primary Data Assets and reusable item stack structures.
- Built the project with a scalable foundation for future procedural ship generation and ship-raiding gameplay.

Everyday Deals - Affiliate Product Aggregation Platform January 2026 – Present
Personal Project Cary, NC

A full-stack affiliate marketing application for discovering product deals, searching listings, filtering by category, and securely managing products through an admin API.

- Built searchable, paginated product browsing with category filters.
- Implemented RESTful product CRUD endpoints with soft-delete support.
- Protected product write operations with an API-key security layer.
- Configured MySQL persistence.

RUMBLE - Outdoor Roomba Jan 2025 – Dec 2025
Iowa State University Ames, IA

Designed and developed a responsive React-based web application for managing autonomous outdoor cleaning robots with secure authentication and real-time monitoring capabilities.

- Implemented user registration, login, password recovery, profile management, and form validation with error handling.
- Built an interactive dashboard with live robot tracking via Google Maps API, fleet statistics visualization, and robot assignment management.
- Developed settings page for profile management, password changes, and account preference updates.
- Implemented user interface features including animations, loading states, and accessibility standards.
- Built REST API endpoints for user management and robot assignment operations using Spring Boot and Java.
- Tech Stack: React.js, JavaScript, Tailwind CSS, Spring Boot, Java, REST APIs, Google Maps API, Git

RSFS (Ridiculously Simple File System) Apr 2024 – Apr 2024
Iowa State University Ames, IA

Developed a complete in-memory file system in C, implementing both basic and advanced file operations while mastering concurrent programming challenges.

- Built all 8 core API functions (open, append, read, fseek, close, delete, write, cut) supporting multi-block file storage with bitmap-based resource allocation.
- Solved the readers-writers concurrency problem using POSIX pthreads, allowing multiple readers simultaneous access while enforcing exclusive writer locks to prevent data corruption.
- Designed a complete file system architecture, including linked-list directory management, inode allocation tracking, and synchronized access controls across the entire system.
- Validated implementation thoroughly with sequential tests covering file operations across block boundaries and concurrent stress tests with simultaneous readers and writers to verify correctness under contention.

Card Shark – Android Card Game Aug 2022 – Dec 2022
Iowa State University Ames, IA

Developed an Android card game with deck management and multiplayer functionality.

- Implemented REST APIs to support gameplay logic and deck mechanics for multiplayer card game application.
- Designed relational database schema for player cards, decks, and game lobbies using SQL and MySQL.
- Developed inventory logic, battle mechanics, and game state management using Spring Boot and Java.
- Tech Stack: Spring Boot, Java, JPA, SQL, MySQL, GitHub

Assignment Tracker Web App Jan 2022 – May 2022
Iowa State University Ames, IA

Developed UI for a web application using HTML 6, CSS, and JavaScript to manage assignments and track due dates.

- Developed a responsive user interface using HTML5, CSS, and JavaScript for web application.
- Built an authentication system, admin tools, and assignment management screens with comprehensive form validation.

Traffic Light System Jan 2022 – Apr 2022
Iowa State University Ames, IA

Designed and created a traffic light system in Verilog and Block design using Intel Quartus Prime.

- Designed a traffic control system using Verilog hardware description language and block design tools.
- Implemented system on DE2-115 FPGA board using Intel Quartus Prime, digital logic, and hardware integration.

Pokémon Game Jan 2022 – Apr 2022
Iowa State University Ames, IA

Implemented Pokémon stats and abilities from a Pokédex folder, multiple landscapes and maps with Pokémon trainers and facilities.

- Implemented Pokémon statistics, attributes, and game maps using C programming language.
- Developed game battles, combat mechanics, and text-based user interface using C.

Text-Based Maze Runner Game Jan 2021 – May 2021
Iowa State University Ames, IA

Created a text-based Maze Runner game in C language to demonstrate various C coding skills.

- Developed a text-based maze game in C using file input/output, pointer manipulation, and data structures.
- Collaborated with team members to debug issues, troubleshoot problems, and implement game features.

2D Chess Game Jan 2021 – May 2021
Iowa State University Ames, IA

Created real-life Chess using Java with GUI game pieces and a Chess board.

- Developed a graphical chess game using Java programming language with Swing GUI framework.
- Implemented chess rules, move validation algorithms, and game logic components.

Android app for Renting Farming and Agricultural Equipment January 2020 – May 2020
John Deere Academy Bettendorf, IA

Designed and created a User interface of an Android application with navigation flows and screen transitions at John Deere Academy.

- Designed and created a User interface of an Android application
- Implemented navigation flows between screens and screen transitions
- Coded buttons and screen behaviors
- Worked in an Agile team of 6 team members. Participated in Scrum rituals during the project

3D Escape Room Simulator Jan 2019 – May 2019

Pleasant Valley High School Bettendorf, IA

Designed and created terrain and various sets of level 1 and level 3 escape rooms using Unity Game creation platform.

- Created 3D game assets, terrain, and level designs for escape room simulator game.
- Implemented randomized gameplay logic for procedural level generation and puzzle variation.
- Tech Stack: C#, Unity Game Engine, Blender 3D

Education

Bachelor of Science — BS, Software Engineering 2020 – 2025

Iowa State University

High School Diploma 2016 – 2020

Pleasant Valley High School

Certifications & Achievements

- Apple Certified Repair Technician
- Dell Certified Repair Technician
- C++ Class Development
- C++ Programming for Unreal Game Development
- Intermediate Object-Oriented Programming for Unreal Games
- Introduction to C++ Programming and Unreal
- More C++ Programming and Unreal
- Unreal Engine 5 C++ — The Ultimate Game Developer
- Microsoft Technology Associate – Introduction to Programming with Java
- Rank #1 for C++ Programming on HackerRank
