Om Shukla

Student at Iowa State University
Bettendorf, Iowa, United States

Summary

Problem solver, experienced with Agile software development, and a team player working towards a Bachelor of Science degree in Software Engineering at Iowa State University. Aiming to use knowledge of programming with Java, JavaScript, C, C++, data structures, MySQL, mobile application development using Android Studio, and Game Development using Unreal Engine to satisfy IT needs at your organization.

Experience

Iowa State University
RUMBLE - Outdoor Roomba
January 2025 - Present (1 year)
Ames, IA

- Designed and developed a responsive React-based web application for managing autonomous outdoor cleaning robots with secure authentication and real-time monitoring capabilities.
- Implemented user registration and login system with password recovery, profile management, and form validation with user-friendly error handling.
- Created an interactive dashboard featuring live robot location tracking via Google Maps API, fleet statistics visualization, and robot assignment management.
- Developed comprehensive settings page allowing users to update profiles, change passwords, and manage account preferences with real-time validation.
- Implemented modern UX features including typewriter animations, glassmorphism design, loading states, and accessibility standards.
- Contributed REST API endpoints to Spring Boot backend for user profile management, password reset functionality, and robot-to-user assignment operations.
- Technologies used: React.js, JavaScript, Tailwind CSS, Spring Boot, Java, REST APIs, Google Maps API, Git.

Iowa State University Book Store

Repair Technician

January 2024 - May 2024 (5 months)

Ames, Iowa, United States

- Worked on diagnosing and repairing hardware and software issues for Apple and Dell devices, including laptops, and desktops.
- Responsibilities included display, motherboard, battery and keyboard replacements, troubleshooting operating system problems, and providing technical support to customers.
- Maintained accurate repair records, and stayed updated with the latest industry trends to ensure high-quality service and customer satisfaction.

Iowa State University

Card Shark – Card Game for Android OS

August 2022 - December 2022 (5 months)

Ames, Iowa, United States

- Implemented REST APIs to accept moves from game UI and process the logic.
- Implemented REST APIs to support a deck mechanism where player can create up to 3 unique decks of 10 cards to use in battles.
- Implemented parts of game play where the player uses cards to battle with another player.
- Implemented logic to keep inventory to track of cards the player owns.
- Created database design and table structure to store information about cards, players, decks and lobby.
- Technologies used: Spring Boot, Java, JPA, SQL, MySQL, GitHub.

Iowa State University Book Store

Sales Floor Associate - TechCyte

June 2022 - September 2022 (4 months)

Ames, Iowa, United States

- Recommended and helped choose computer devices to customers based on their major or position, researched and provided information on helpful accessories, software and tools and answered general technology questions.
- Maintained floor displays and information presented to customers, inventory stocks in the store.
- Handled sales and provided services related to technology needs of the students, faculty and staff on the campus.

Iowa State University

5 months

Assignment Tracker Web application

January 2022 - May 2022 (5 months)

Ames, Iowa, United States

- Developed UI for a web application using HTML 5, CSS, JavaScript.
- Designed and implemented screens for User authentication, Add/Update User Admin page, Assignments management pages and a dashboard to view list of assignments by due dates with necessary user actions and on-screen validations for user inputs and service calls.

Traffic Light System

January 2022 - April 2022 (4 months)

Ames, Iowa, United States

- Designed and created a traffic light system in Verilog and Block design using Intel Quartus Prime.
- Implemented and tested the system using DE2-115 board.
- Created circuit for managing number of cars in each side of the lane at the intersection.
- Created Verilog logic for managing greenlight in the intersection.

Pokémon Game

January 2022 - April 2022 (4 months)

Ames, Iowa, United States

- Implemented Pokémon stats and abilities from a Pokédex folder.
- Implemented multiple landscapes and maps, Pokémon trainers and facilities, transfer between maps, terrain generation and User Interface using C language.
- Implemented loading Pokémon into the maps, and Pokémon battles in C++.

Iowa State University

5 months

Text based Maze runner

January 2021 - May 2021 (5 months)

Ames, Iowa, United States

- Created a text-based Maze runner game in C language. Helped team members debug issues and fix defects.
- Worked on a team of 3 students to demonstrate various C coding skills like pointers, structures, file I/O, methods, exception handling.
- Created and implemented Maze to start the game, level transitions, points, and inventory for the player and non-player characters.

2D Chess Game

January 2021 - May 2021 (5 months)

Ames, Iowa, United States

- Created real-life Chess using Java.
- Created GUI game pieces and a Chess board.
- Implemented Java logic to hold each game piece information and X/Y coordinates on the board. Updated game piece objects after every move.
- Implemented check algorithms for each game piece to find all positions a selected piece can move. The new position must be within piece movement parameters and must not already contain a different game piece.
- Technologies used: Java and Swing

John Deere

John Deere Academy

January 2020 - May 2020 (5 months)

Bettendorf, Iowa, United States

Android app for Renting Farming and Agricultural Equipment

- Designed and created a User interface of an Android application.
- Implemented navigation flows between screens and screen transitions.
- Coded buttons and screen behaviors.
- Worked in an Agile team of 6 team members. Participated in Scrum rituals during the project.
- Technologies used: Android Studio, Java, GitHub, Discord, WebEx meetings and Trello for Scrum process.

Pleasant Valley High School

3D Multi-level Escape Room Simulator

January 2019 - May 2019 (5 months)

Bettendorf, Iowa, United States

- Designed and created terrain and various sets of level 1 and level 3.
- Created game assets like tables, crates, household items.
- Implemented randomize code logic for each level.
- Worked in team of 3 members.
- Technologies used: C#, Unity Game creation platform, Blender-3D model creation platform.
